

SILO PROTECTION

The SHIELD system controls and eliminates issues associated with:

 <p>Silo Ruptures</p>	 <p>Blocked Relief Valves</p>	 <p>Powder Blowouts</p>	 <p>Overfilled Silos</p>	 <p>Filter Obstructions</p>
--	--	--	---	--

It takes only a small increase of internal pressure (as little as 1 psi) to rupture a silo or blow the filter unit off the roof – costing your plant time, money, and risking employees’ safety. The SHIELD Silo Protection System from Hycontrol works around-the-clock, protecting your team, minimizing over-pressurization risks and reducing service time.

Innovation with Ground Level Testing Capabilities

With SHIELD’s Ground Level Testing function, both testing time and employee risk are minimized. This innovation allows complete functional testing of silo protection equipment in situ, with both feet firmly on the ground - in just six seconds.

Protect. Prevent. Strengthen.

The SHIELD system can help your plant:

- ✓ Reduce spills
- ✓ Decrease filter and silo damage
- ✓ Minimize product loss
- ✓ Decrease maintenance costs
- ✓ Reduce environmental impact
- ✓ Provide a safer working environment
- ✓ And much more

SCHEDULE A MEETING

Ready to kickstart a project? Schedule a meeting with our team.
